DESCRIPTION

EV/DV300 series multifunction three phase power and energy meter provide a low cost metering solution with reliable power metering for voltage, current, power and bi-direction energy parameters.

Advanced measuring technologies ensure robust and accurate measuring in all types of environments.

Any-Rating Meter

Voltage: Measuring from 10V to 400Vac in one unit that works in any voltage rating system with or without potential transformer.

Current: 5A and 1A input field configurable that suits any industrial current transformer.

Frequency: Automatically adapt to 50Hz and 60Hz system without compromising the accuracy, that simplify design and eliminate international OEM frequency issues.

Digital Input

Monitor switch status and directly show on display and remotely accessed by communication.

Built-in Power Supply

24Vdc provides direct power supply to digital input. Reduce the cost and complication and space of additional low voltage power supply in panel.

Digital Output

Pulse output provides energy data to any data acquisition server without communication

Analog Output

4-20mA transducer type analog output can be used with any PLC directly.

Relay Output

Over/under limit triggered tripping relay output to control load on/off.
